

Padmount Hex Adapter Set

The Padmount Hex Adapter Set includes two 3/4" drivers for a 3/8" and 5/16" Allen head connector commonly used on busbars inside URD pad gear. Works with any 3/4" open-end or box-end wrenches and any type of socket drivers (ratcheting or powered).

The low profile design allows access to connectors when space is limited. Just 1/2" is exposed above the bar, while a 1/2" allen driver fully engages the connector to avoid stripping. Low profile means less chance of touching other connections or exposed metal.

- Each adapter is made from hardened steel and chromed for long life.
- Includes one 3/8" adapter and one 5/16" adapter.
- Five Year Warranty!
